### OUR PLANETARY FATE COMMUNITY

*You can't find a new land with an old map!*

On the front, our planet is shown from an unusual perspective: Not only is the north reversed with the south, the logo also shows the underlying tectonic plates instead of the continents. The earth's crust, on which all our lives take place, is only 35 kilometres thin - comparatively thinner than the shell of a chicken egg, and much more fragile. Because these plates shift by a few centimetres every year and cause abrupt changes again and again: Earthquakes, tidal waves or volcanic eruptions. A striking indication of the earthly community of fate in our "Homeland Earth".
